PUBLIC

Resume Analyzer

01

https://app.matchpoint.io/

The public Resume Analyzer is available without signing in. Paste your resume and a job description to receive an instant AI-powered match score with detailed feedback.

Feature Overview

- Match Score (0–100) — AI-computed overall compatibility
- Section Scores — Experience, Education, Skills, Certifications
- Matched Keywords — terms present in both resume and JD
- Missing Keywords — important JD terms absent from the resume
- Strengths — what the candidate does well relative to the JD
- Gaps — areas needing improvement or absent from the resume
- Actionable Suggestions — specific, prioritised recommendations

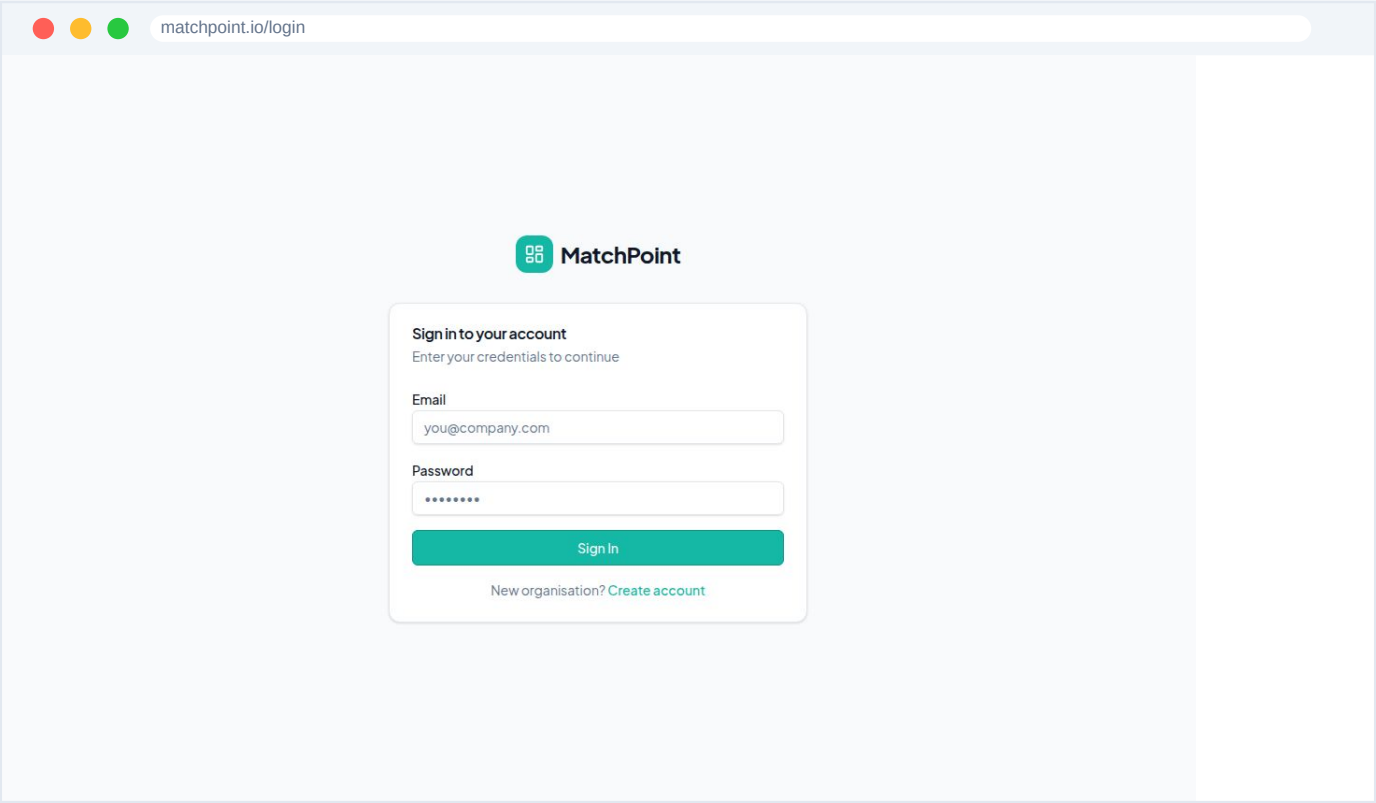
PUBLIC

Sign In

02

https://app.matchpoint.io/login

Secure enterprise authentication. Enter your email and password to access enterprise features. Sessions last 7 days with JWT tokens stored securely.



Key Features

- Email + password authentication with bcrypt hashing
- JWT token valid for 7 days — no need to log in daily
- Automatic redirect to the last visited enterprise page
- Create Account link for new organisation registration
- Role-based access: navigation adapts to your permission level

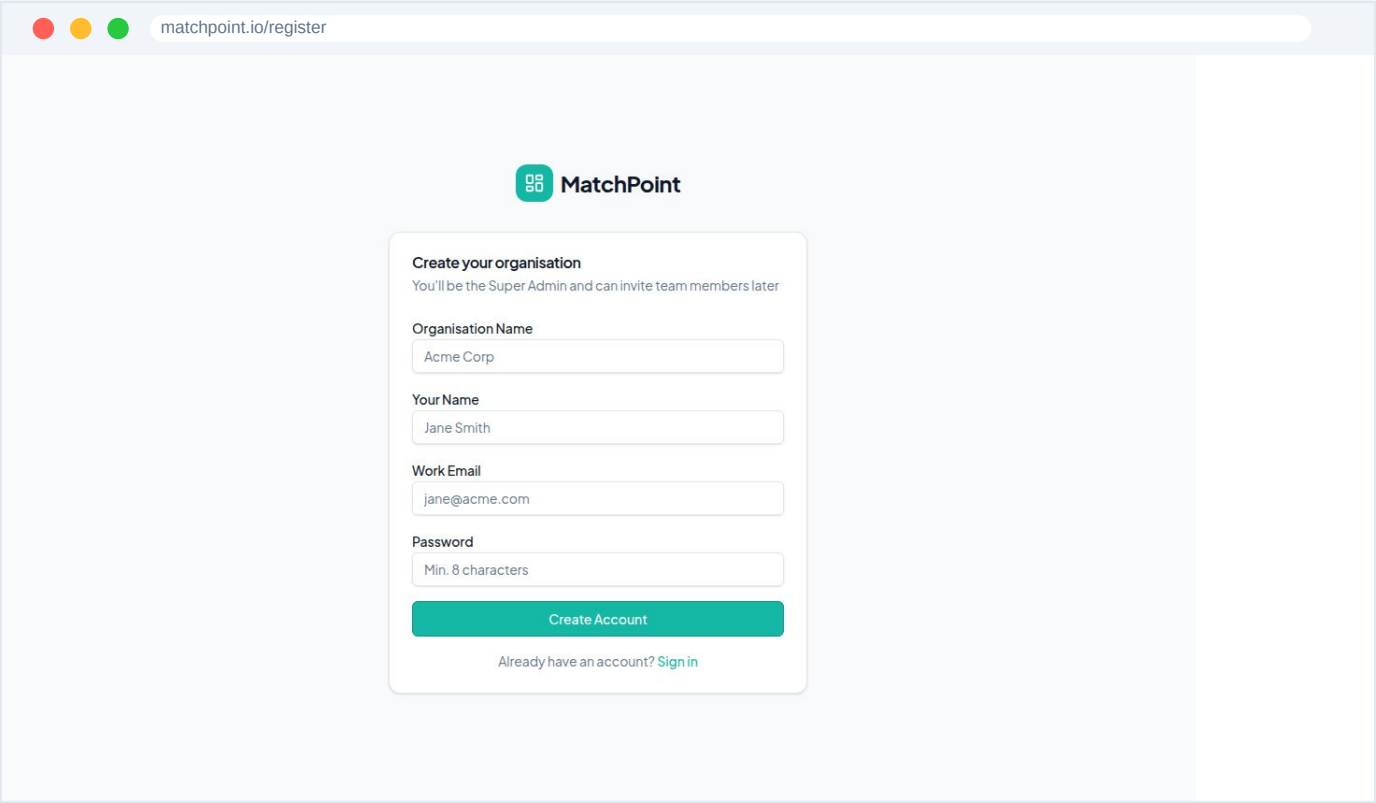
PUBLIC

Create Organisation

03

https://app.matchpoint.io/register

Register your company to unlock all enterprise features. You become the Super Admin for your organisation — the highest permission level.



Key Features

- Organisation name becomes your isolated tenant workspace
- Automatic Super Admin role on first registration
- All data is strictly isolated — no cross-tenant access ever
- Invite team members after registering from the Team page
- Up to 5 roles available: super_admin, hr_admin, hiring_manager, recruiter, employee

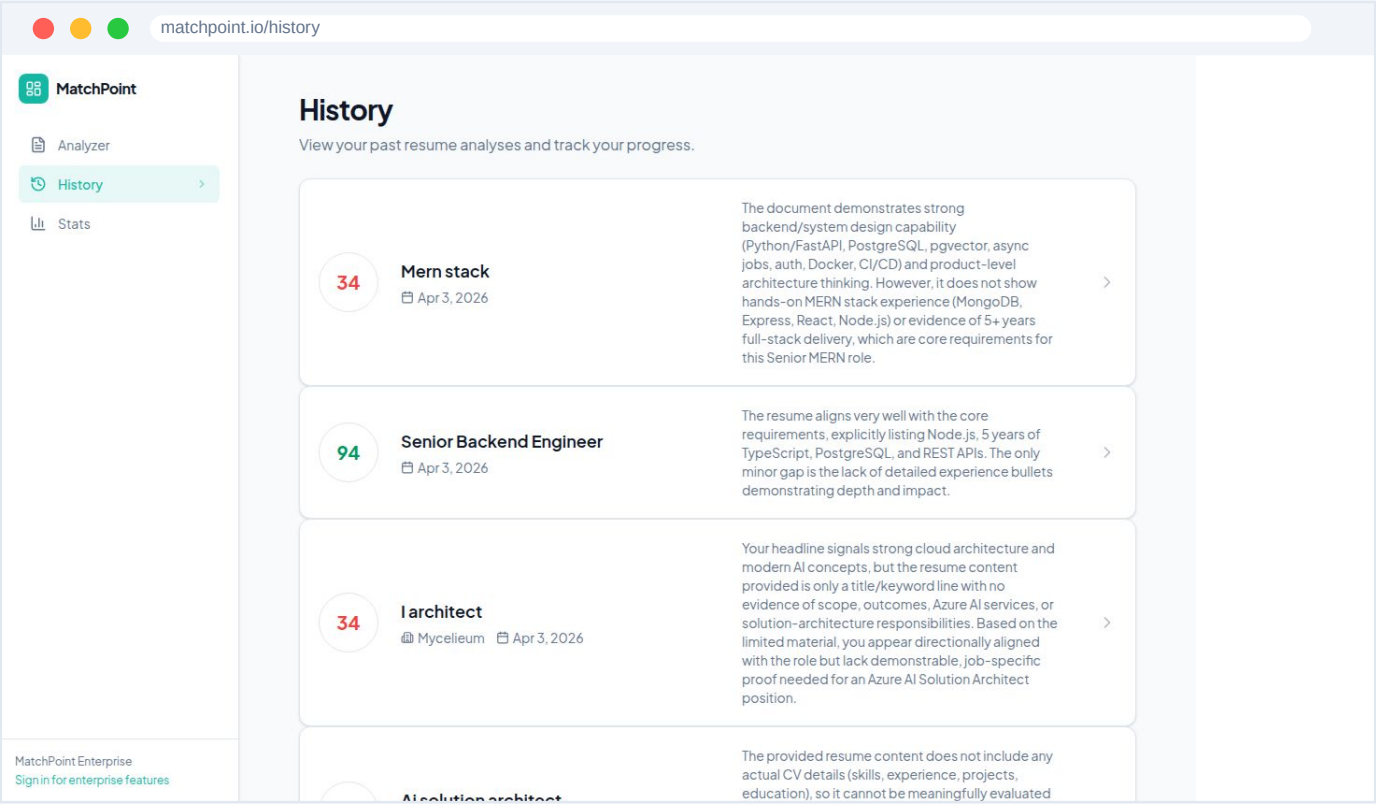
PUBLIC

Analysis History

04

https://app.matchpoint.io/history

View all past resume analyses run in the current session. Each row shows the date, score, job title, and a summary of the AI's assessment.



Key Features

- Chronological list of all analyses in the current session
- Match score badge with colour coding (red/amber/green)
- Job title and company extracted from the job description
- AI summary snippet for a quick at-a-glance assessment
- Click any row to re-open the full detailed result

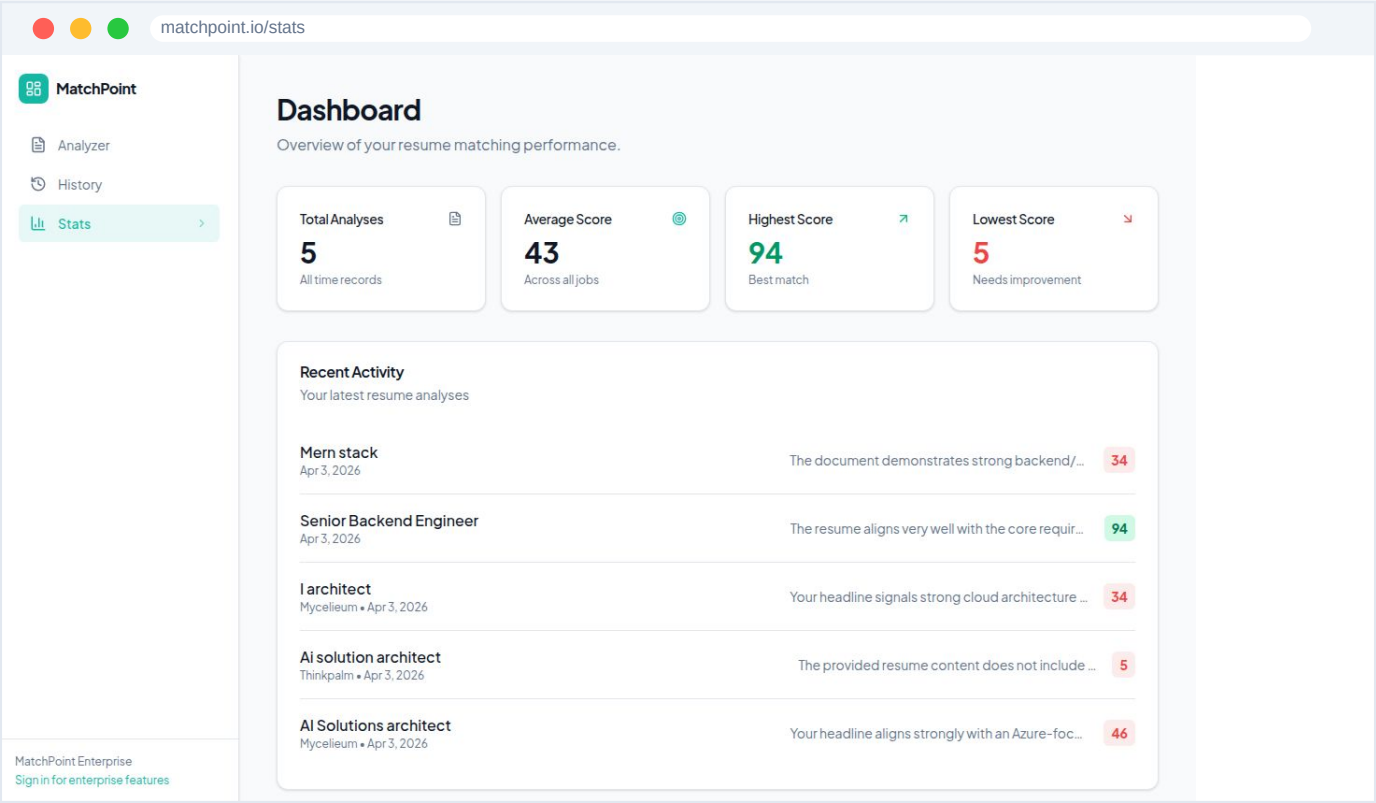
PUBLIC

Platform Statistics

05

https://app.matchpoint.io/stats

A dashboard showing aggregate metrics from all analyses run on the platform. Includes total count, average score, highest/lowest scores, and recent activity.



Key Features

- Total analyses count — all-time platform records
- Average match score across all analyses
- Highest and lowest scores with colour highlights
- Recent activity feed — latest 5 analyses at a glance
- Score breakdown by range — how candidates distribute across bands

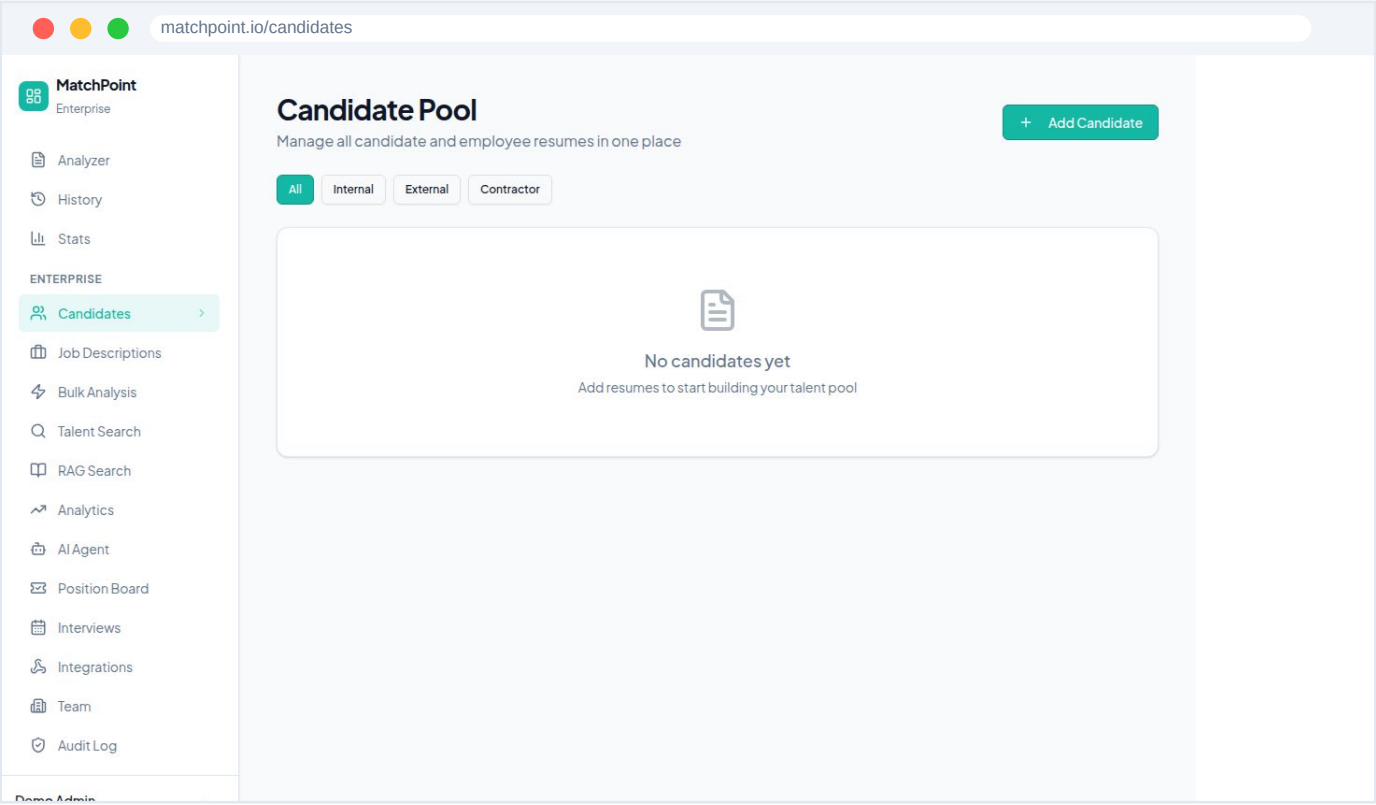
ENTERPRISE

Candidate Pool

06

https://app.matchpoint.io/candidates

Central repository for all candidate resumes in your organisation. Upload PDFs or paste text. All profiles are searchable and available for analysis.



Key Features

- Upload PDF resumes with automatic text extraction
- Paste plain-text resumes as an alternative
- Candidate name and email extracted or entered manually
- Search candidates by name or email in the list
- View full profile with all past analyses linked
- Used as the source pool for Bulk Analysis and AI Shortlisting
- All uploads logged in the immutable Audit Log

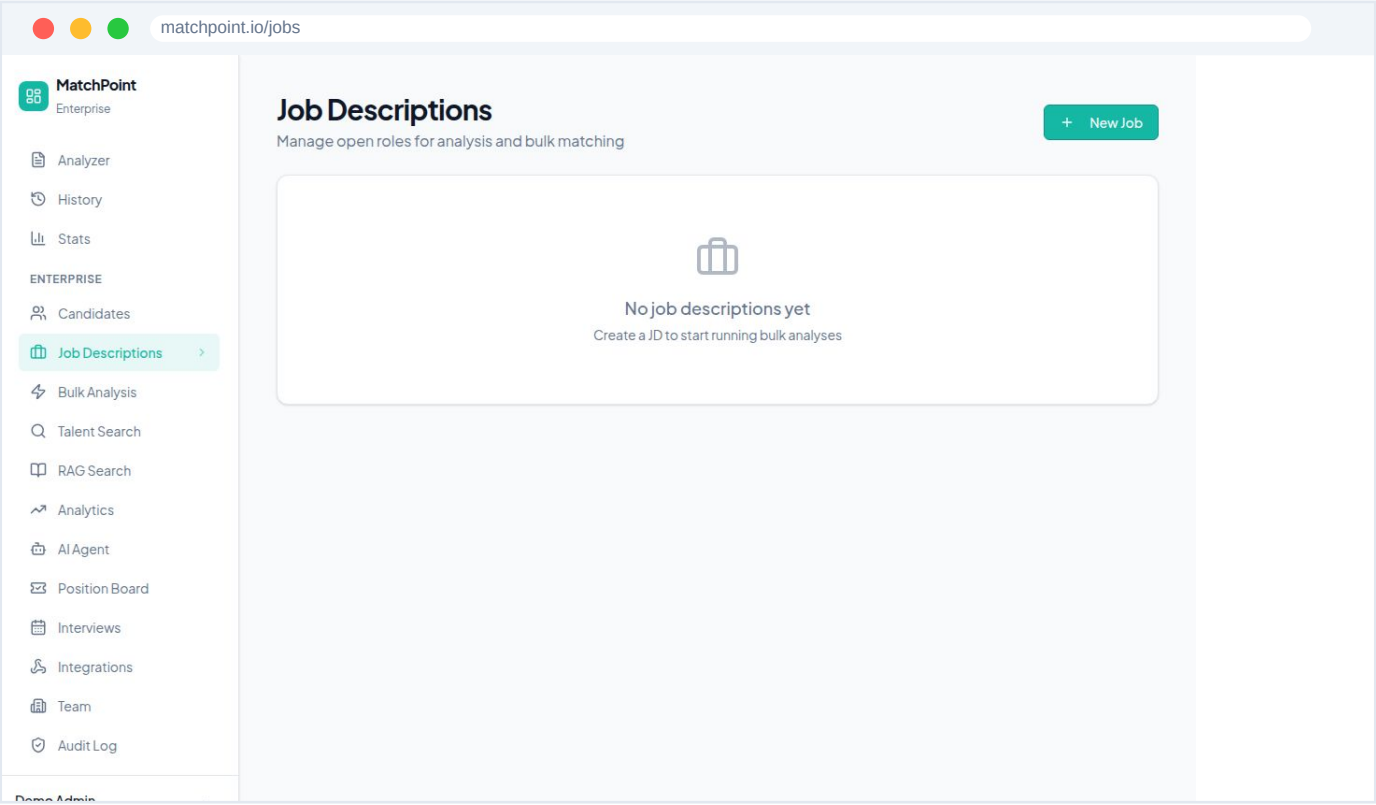
ENTERPRISE

Job Descriptions

07

https://app.matchpoint.io/jobs

Create and manage the library of job descriptions used across all analyses. Three lifecycle states: Draft, Active, and Closed. Assign each JD to a department for organised tracking.



Key Features

- Full CRUD — create, edit, delete job descriptions
- Draft status — JD being written, not yet available for analysis
- Active status — available for bulk analysis and shortlisting
- Closed status — archived; no longer selectable for new analyses
- Filter the list by status using the tab pills
- Assign JDs to a department for cross-department visibility
- JDs are automatically embedded for semantic similarity (text-embedding-3-small)
- Linked to bulk jobs, shortlists, and position tickets

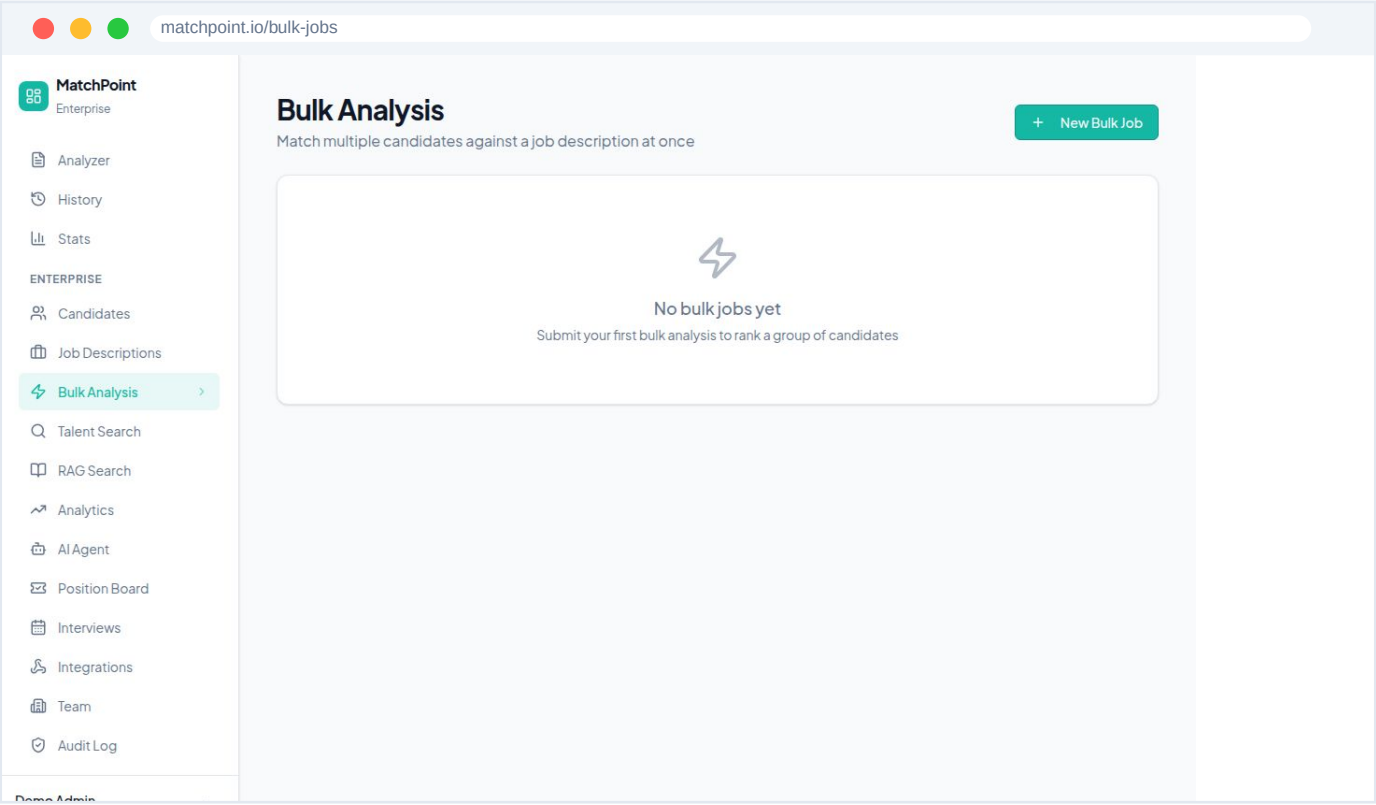
ENTERPRISE

Bulk Analysis

08

https://app.matchpoint.io/bulk-jobs

Score your entire candidate pool against one job description in a single automated job. Results include per-candidate scores and are exportable to CSV.



Key Features

- Select any combination of candidates from the pool
- Choose one Active JD as the benchmark
- Async processing — runs in the background, page auto-refreshes
- Per-candidate match score, gaps, and key strengths
- Job statuses: Pending !' Running !' Completed / Failed
- Export all results to CSV for reporting
- Completed jobs retained for historical comparison

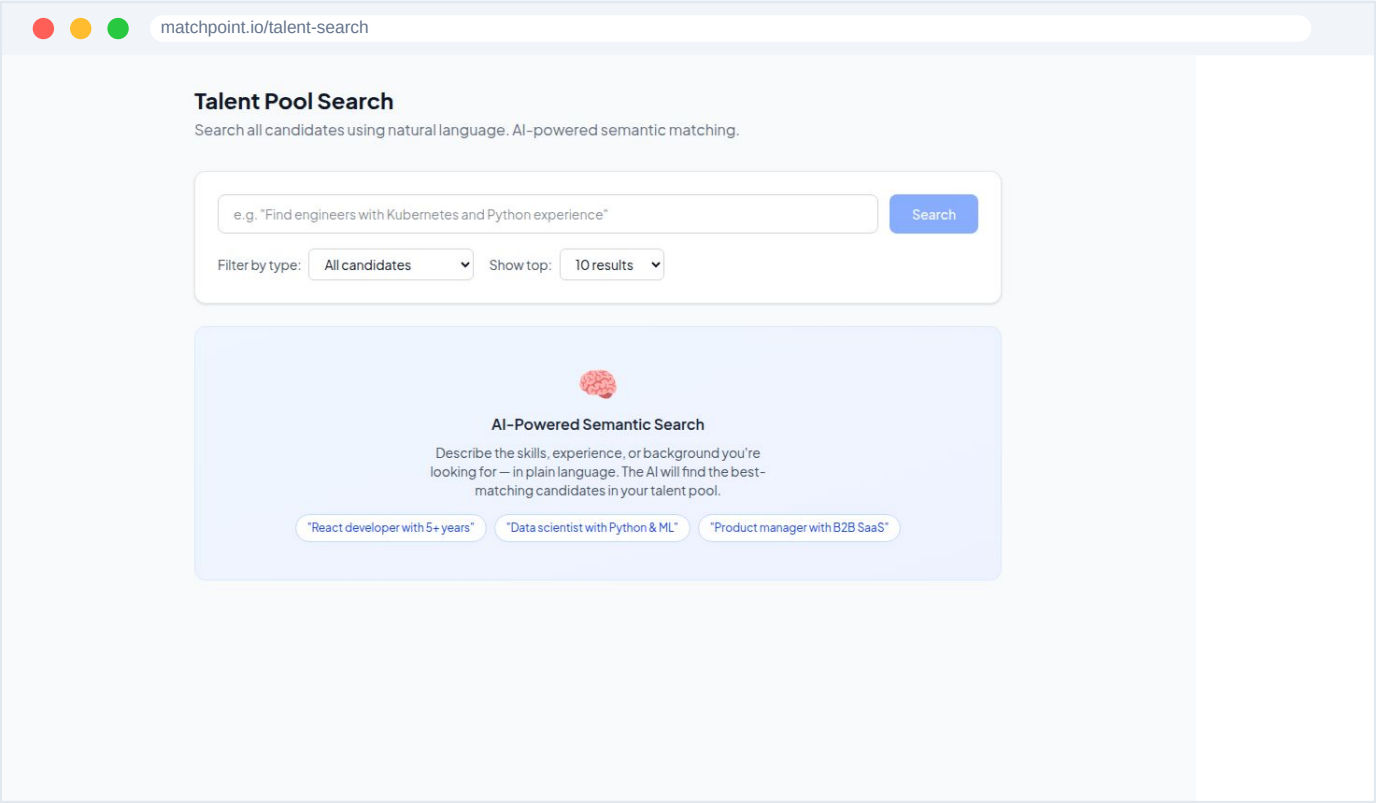
ENTERPRISE

Talent Pool Search

09

https://app.matchpoint.io/talent-search

Semantic full-text search across every resume in your candidate pool using TF-IDF scoring. Results are ranked by relevance with highlighted matching snippets.



Key Features

- Natural language or keyword queries accepted
- TF-IDF semantic ranking — finds the most relevant candidates
- Best-matching snippet extracted and highlighted per result
- Relevance score (0–100) shown per candidate
- Instant results — no separate indexing step required
- Returns candidate name, email, score, and a View Profile link
- Works across all resume text including embedded sections

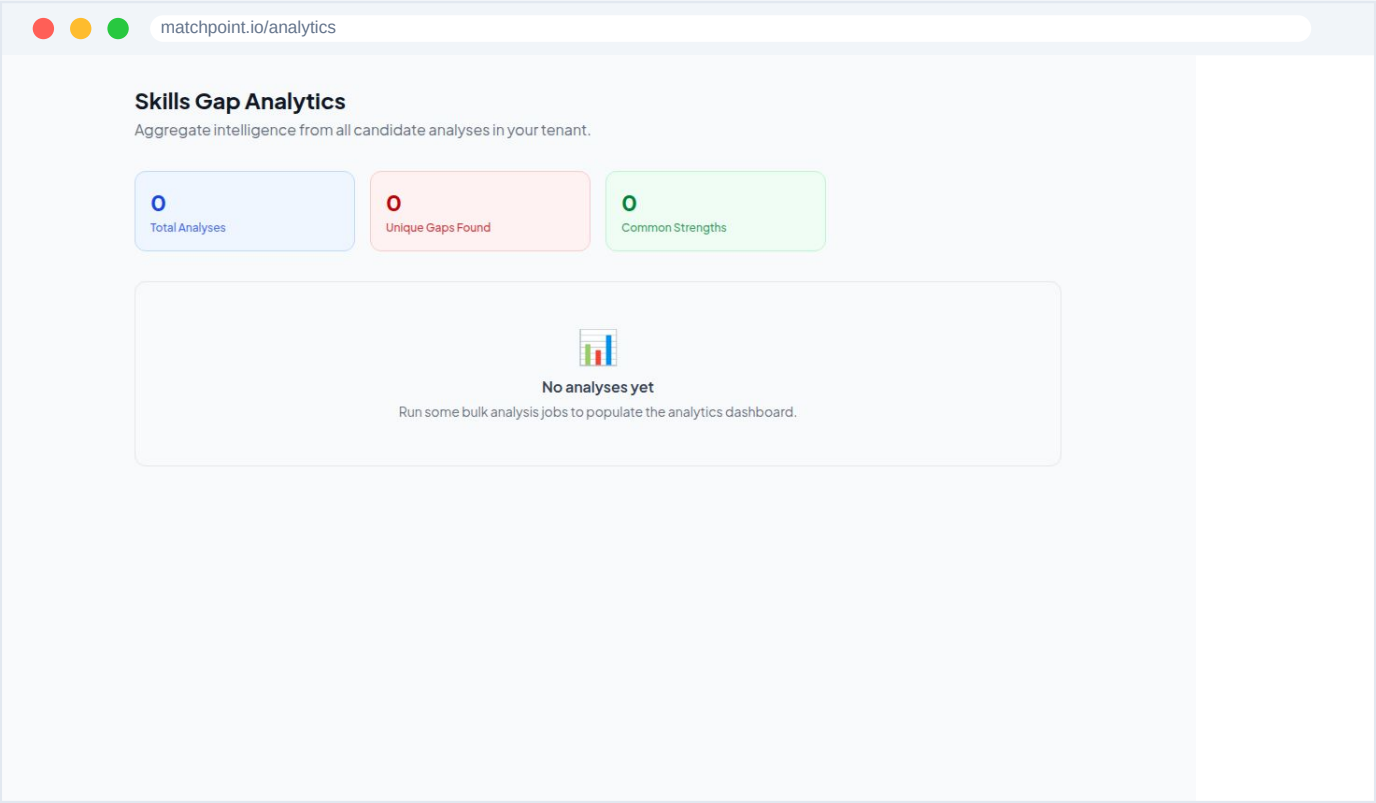
ENTERPRISE

Skills Gap Analytics

10

https://app.matchpoint.io/analytics

Aggregate analytics across all analyses in your tenant. Visualise the most common skill gaps, top strengths, score distributions, and a live department breakdown to inform hiring strategy.



Key Features

- Top Skills Gaps — horizontal bar chart ranked by frequency
- Top Strengths — bar chart of the most common strong points
- Score Distribution — histogram across 5 score bands
- Section Score Radar — average per section (Experience, Skills, Education, Certifications)
- Filter all charts to a single Job Description
- Department Breakdown — per-department open/filled/total positions, capacity bar, and pipeline status badges
- Data updates live as new analyses are completed

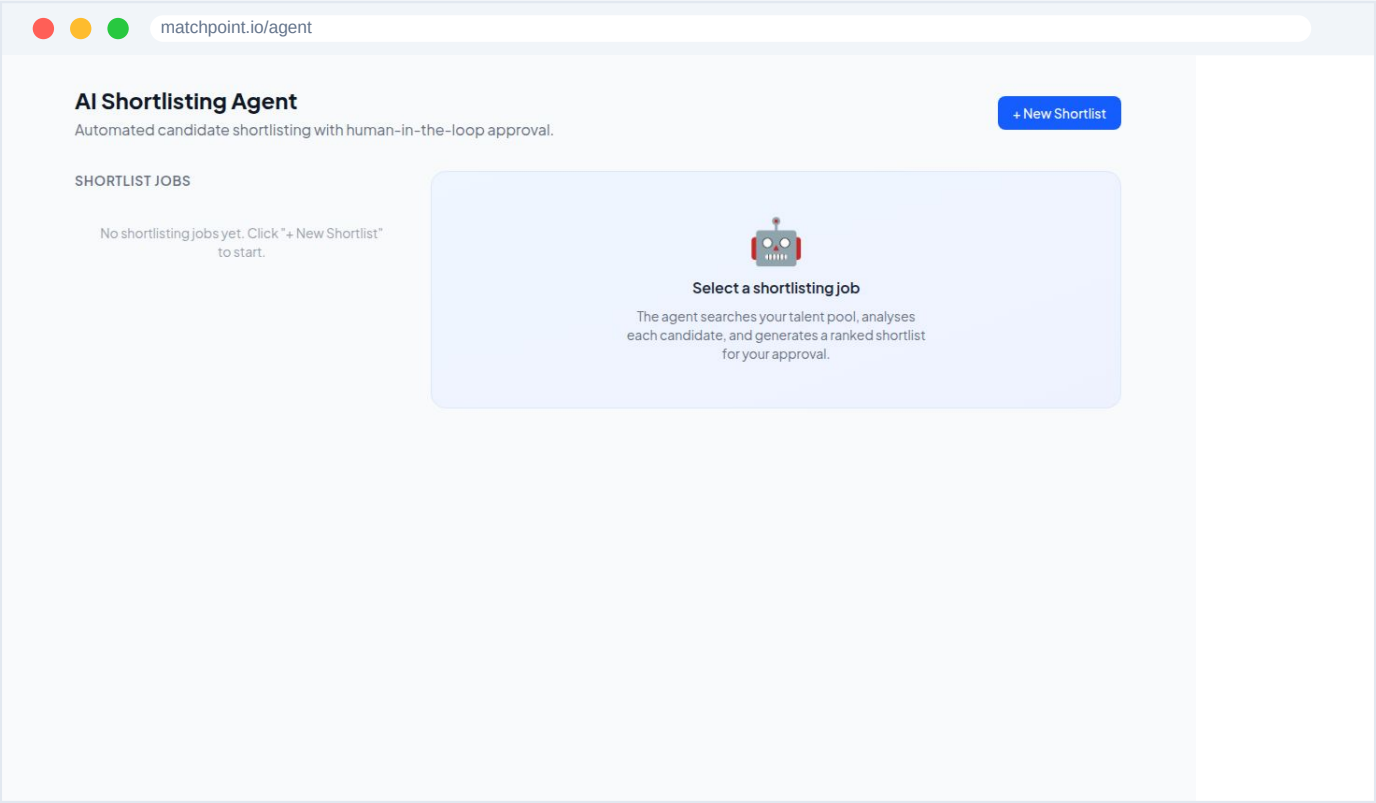
ENTERPRISE

AI Shortlisting Agent

11

https://app.matchpoint.io/agent

Autonomous multi-stage AI agent that ranks candidates and generates a shortlist for HR approval. Human-in-the-loop: HR must approve before action is taken.



Key Features

- Select a JD and set the maximum shortlist size
- Agent works in stages: Search !' Analyse !' Rank !' Report !' Await Approval
- Real-time step log shows agent reasoning for full transparency
- GPT-5.2 individually evaluates each candidate against the JD
- Ranked shortlist with per-candidate reasoning, strengths, and concerns
- HR approves or rejects with optional note — webhook fires on each decision
- Approved shortlists trigger downstream n8n workflows (e.g. Gmail outreach)

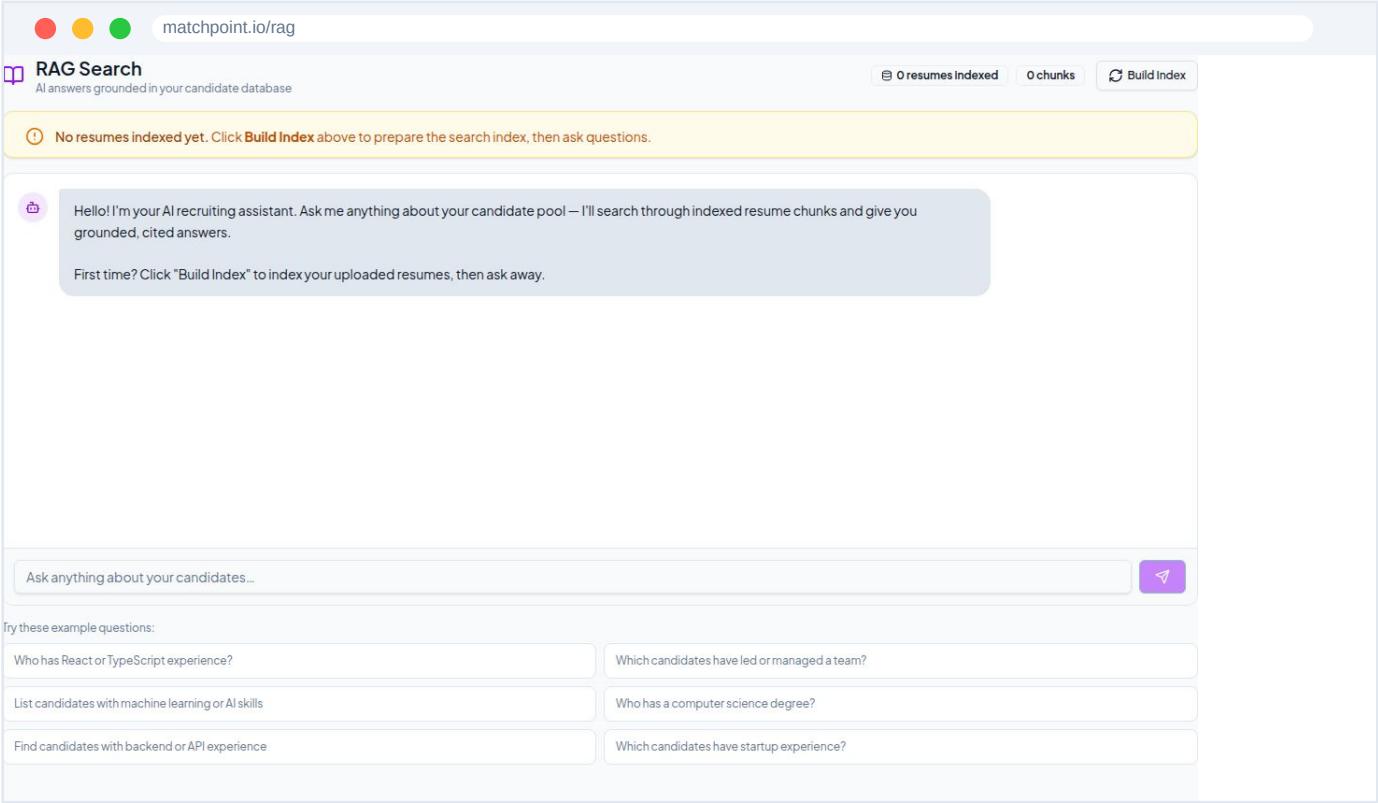
ENTERPRISE

Candidate Q&A (RAG)

12

https://app.matchpoint.io/rag

Ask plain-English questions about your candidate pool. BM25 retrieves the most relevant resume sections; GPT-5.2 synthesises a cited, grounded answer.



Key Features

- Natural language questions — no query syntax required
- BM25 ranking retrieves the top resume sections per query
- GPT-5.2 synthesises answers from real resume content only — no hallucinations
- Every answer includes source citations: candidate name, section, snippet, score
- Conversation-style chat UI with message history
- Example queries: 'Who has Kubernetes experience?', 'Find candidates with a Masters degree'
- Resumes are chunked by section on upload for precise retrieval

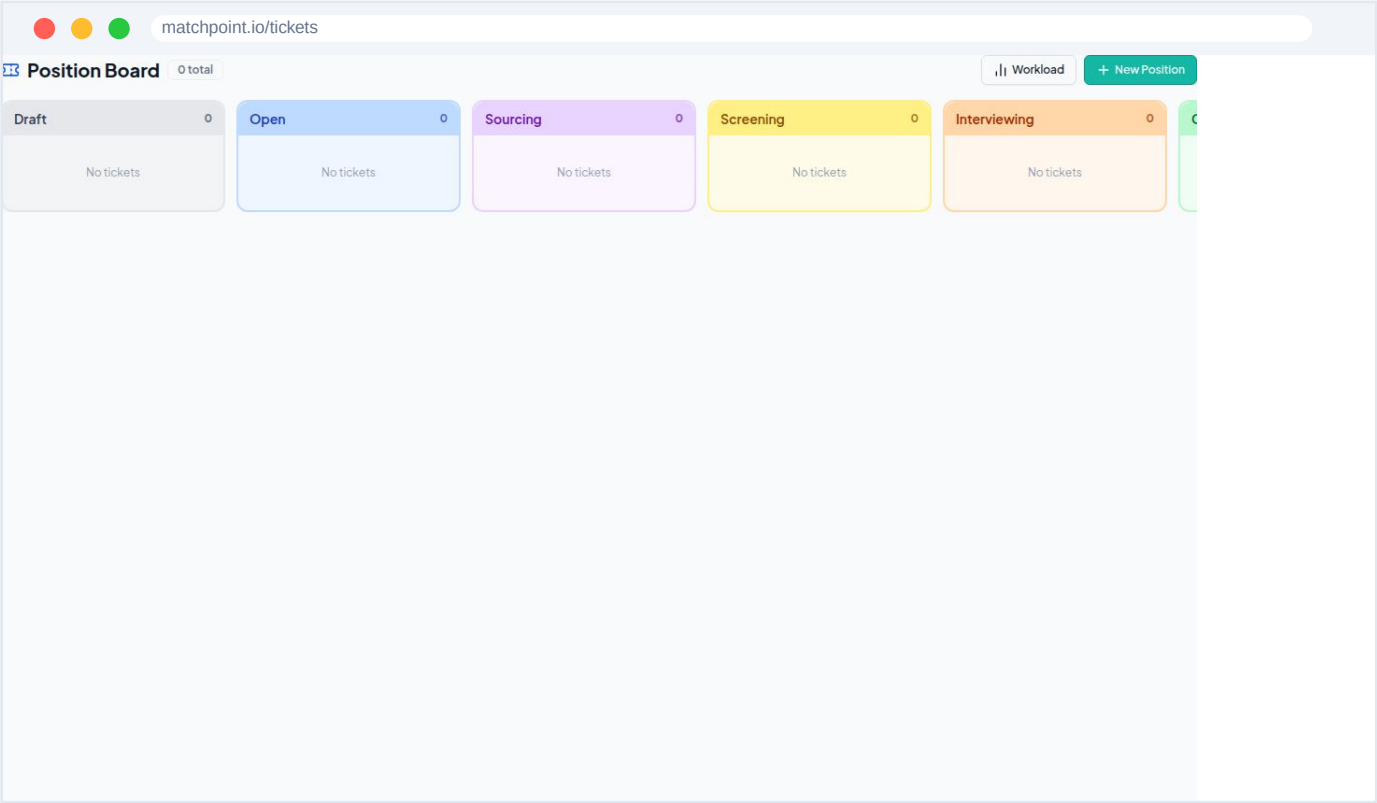
ENTERPRISE

Position Board

13

https://app.matchpoint.io/tickets

7-column Kanban board for tracking every open role through the hiring pipeline. Drag and drop cards between columns to update status. Filter by department. SLA timers per priority level.



Key Features

- 7 columns: Draft !' Open !' Sourcing !' Screening !' Interviewing !' Offer !' Closed
- Drag-and-drop status transitions with instant save
- Filter by department to focus on a single team's open positions
- Assign each ticket to a department in the create / edit dialog
- Priority levels: Critical (14d SLA), High (30d), Medium (60d), Low (90d)
- SLA warning (yellow) and breach (red) badges visible on every card
- Ticket detail: metadata, candidate pipeline, interviews, activity feed, comments
- Recruiter Workload view: bar chart of ticket count per recruiter + SLA breach counts

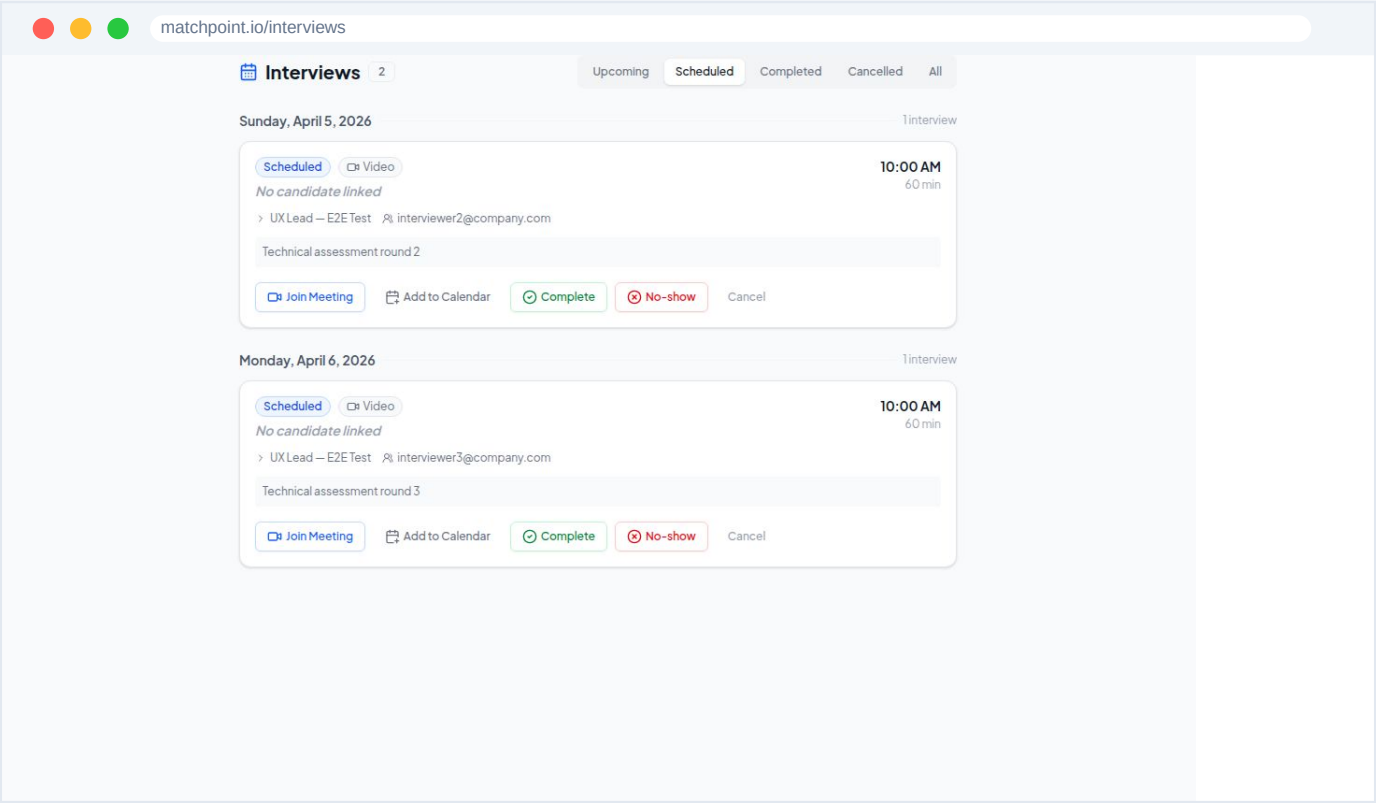
ENTERPRISE

Interview Scheduling

14

https://app.matchpoint.io/interviews

Day-grouped timeline of all interviews across every position. Schedule, complete, cancel, and record structured feedback — all from one page.



Key Features

- Filter pills: Upcoming / Scheduled / Completed / Cancelled / All
- Day-grouped timeline view — easy to scan the week ahead
- Schedule from ticket detail: date/time, type, duration, interviewers, link/location
- Interview types: Phone, Video, Technical, Onsite, Panel
- Add to Calendar button — RFC-5545 .ics download (Outlook / Google / Apple Calendar)
- Complete !' opens 6-dimension feedback dialog
- Request Feedback !' sends Teams DM to all interviewers (webhook event)

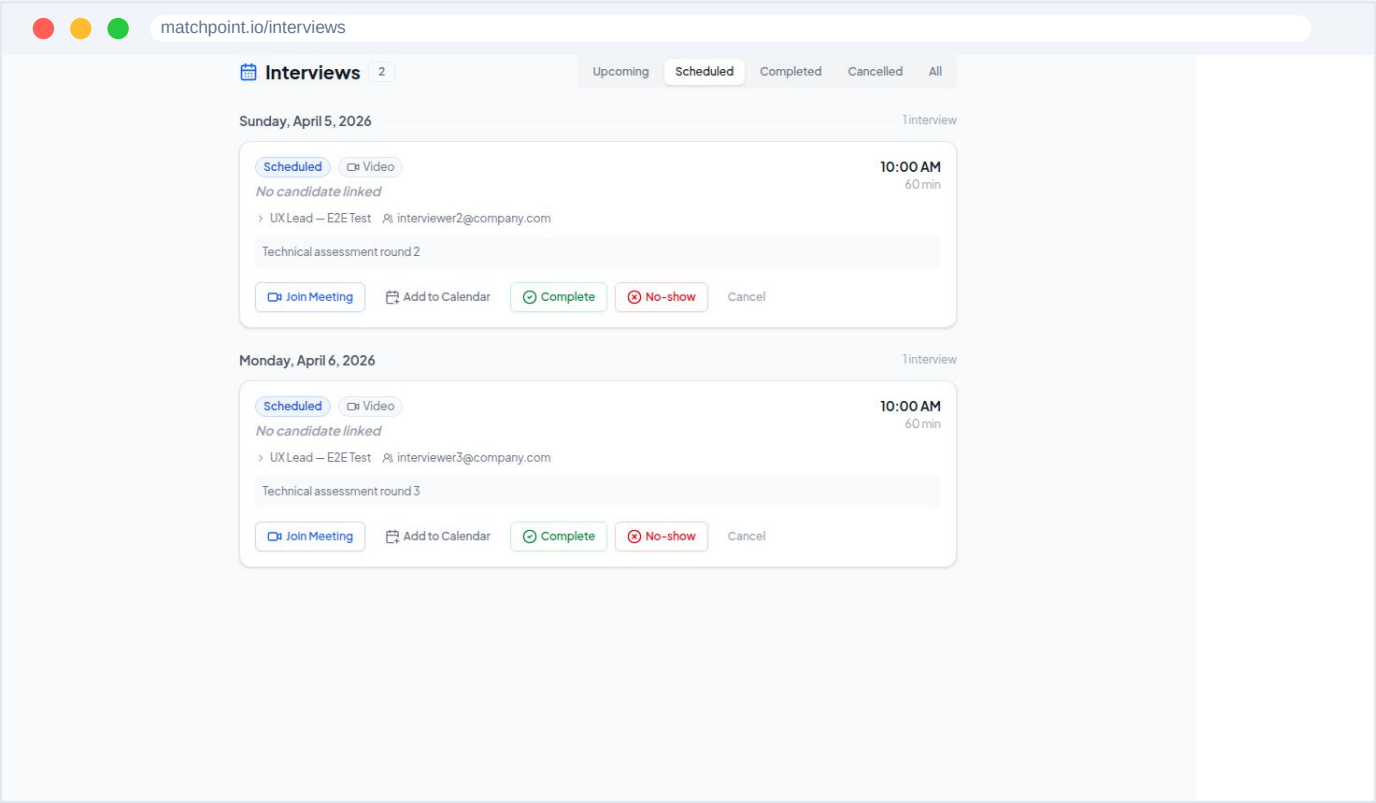
ENTERPRISE

Structured Interview Feedback

15

https://app.matchpoint.io/interviews

When marking an interview complete, rate the candidate across 6 dimensions with star scores and optional comments. Computed overall rating stored per interview.



Key Features

- 6 dimensions: Technical Skills, Communication, Problem Solving, Culture Fit, Relevant Experience, Motivation
- 1–5 star rating per dimension with optional comment
- Computed overall rating — automatic average shown as you score
- Free-text overall summary for qualitative notes
- Dimension scorecard displayed inline on completed interview cards
- Feedback stored as structured JSON in the database
- Used by interviewers and HR to compare candidates across rounds

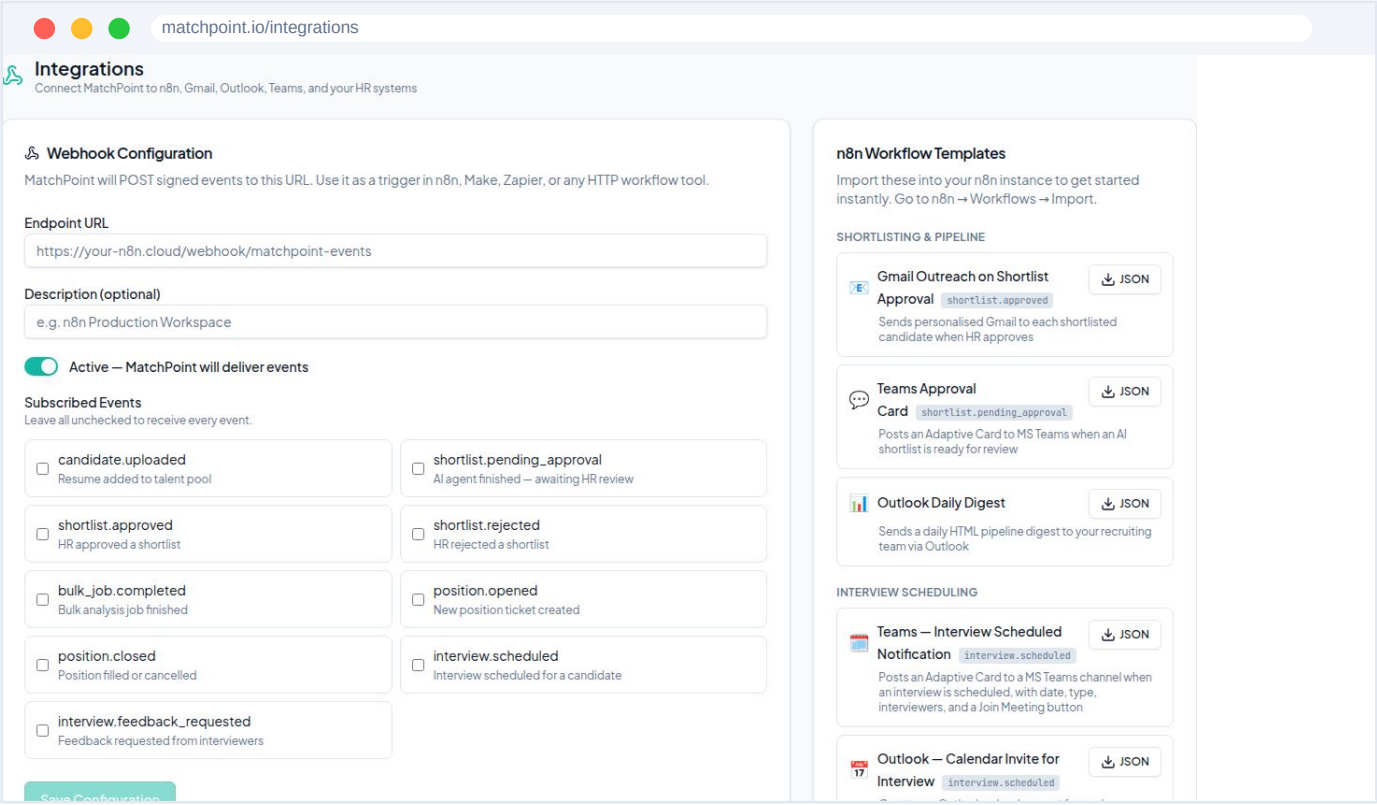
ENTERPRISE

Integration Hub

16

https://app.matchpoint.io/integrations

Configure webhook endpoints, view delivery logs, test events, and download n8n workflow templates for Teams, Outlook, and Gmail automation.



Key Features

- HMAC-SHA256 signed webhooks — verify authenticity of every delivery
- 9 events: candidate.uploaded, shortlist lifecycle, bulk_job.completed, position.opened/closed, interview.scheduled, interview.feedback_requested
- Per-event filtering — subscribe only to events you need
- Delivery log: status, HTTP code, retry count, timestamp
- 3-attempt retry with exponential backoff on failure
- Test-fire any event to your webhook URL on demand
- 6 downloadable n8n templates in two categories: Shortlisting & Pipeline / Interview Scheduling

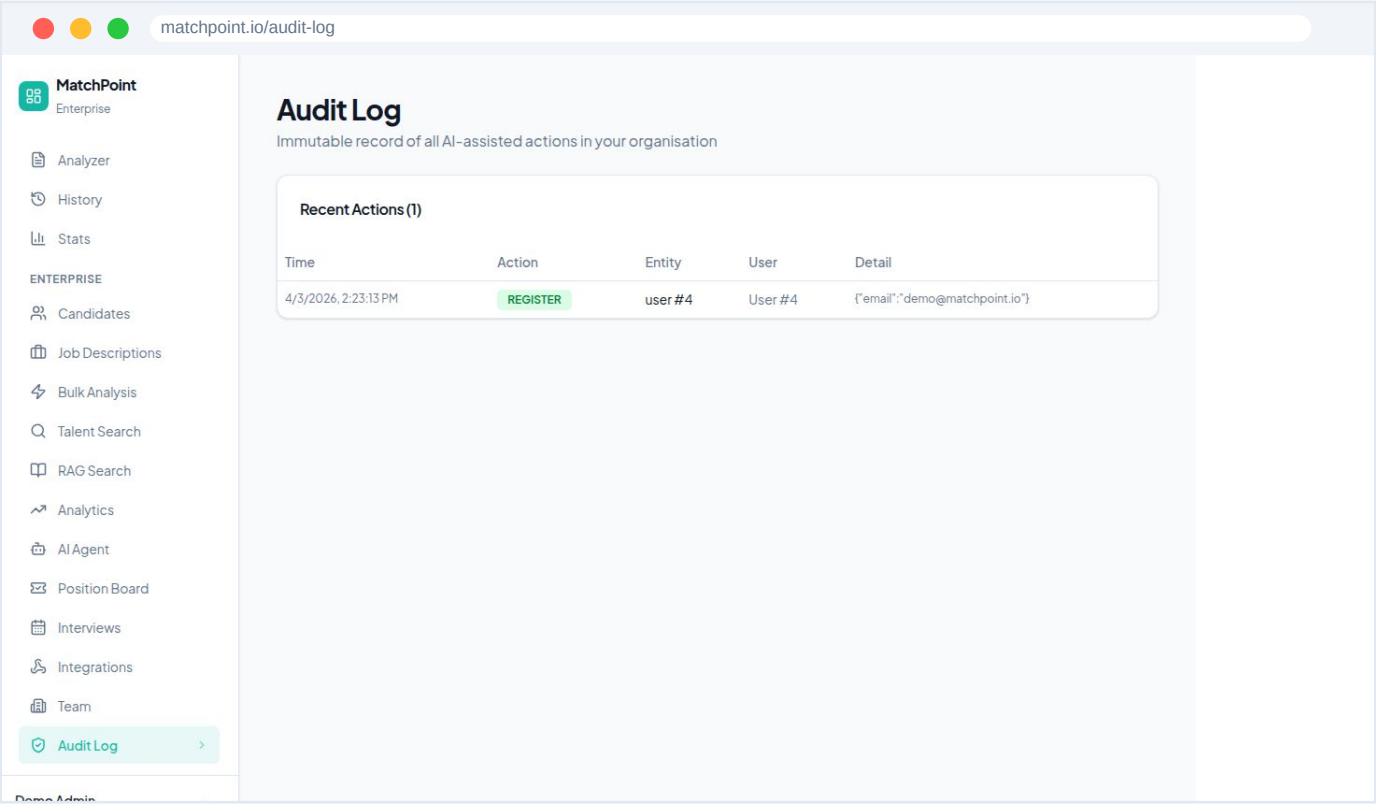
ENTERPRISE

Audit Log

17

https://app.matchpoint.io/audit-log

Immutable, append-only record of every significant action performed in your organisation. Provides a full compliance trail — cannot be edited or deleted.



Key Features

- Covers: auth events, uploads, JD changes, bulk jobs, shortlists, tickets, interviews
- Shows: timestamp, actor, action type, resource type/ID, and metadata
- Append-only — no DELETE routes exist for audit entries
- Chronological feed with newest entries at the top
- Useful for compliance, HR governance, and security audits
- Every enterprise action is logged automatically — no opt-in required

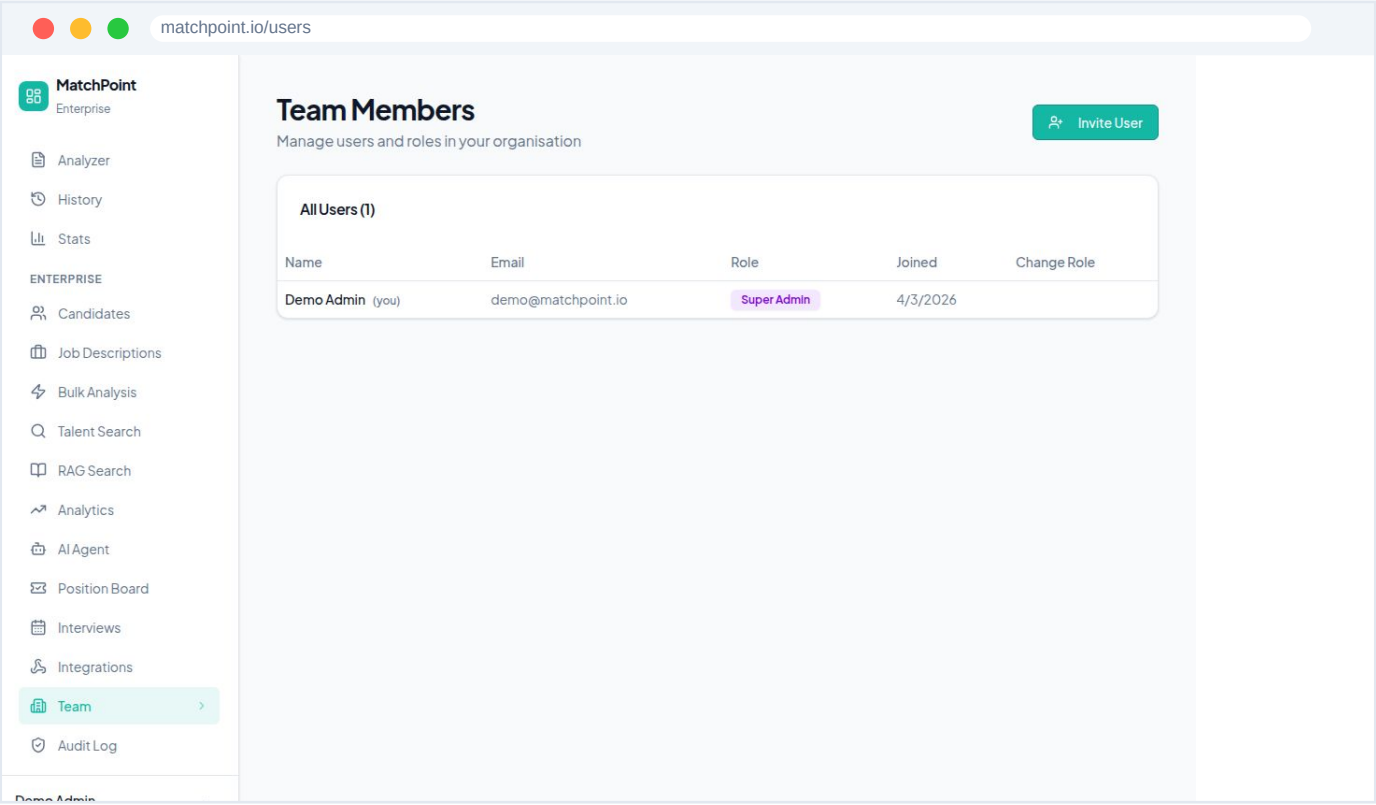
ENTERPRISE

Team Management

18

https://app.matchpoint.io/users

Invite and manage team members. Assign roles that control what each person can see and do across the platform.



Key Features

- View all users: name, email, role, join date
- Invite new users: set name, email, temporary password, and role
- Roles available: super_admin, hr_admin, hiring_manager, recruiter, employee
- super_admin: full platform access + user management
- hr_admin: all analyses, bulk jobs, shortlist approval, user management
- hiring_manager: create JDs, view analyses for their positions
- recruiter: run analyses, manage candidates, schedule interviews
- employee: upload own resume and view own analyses only

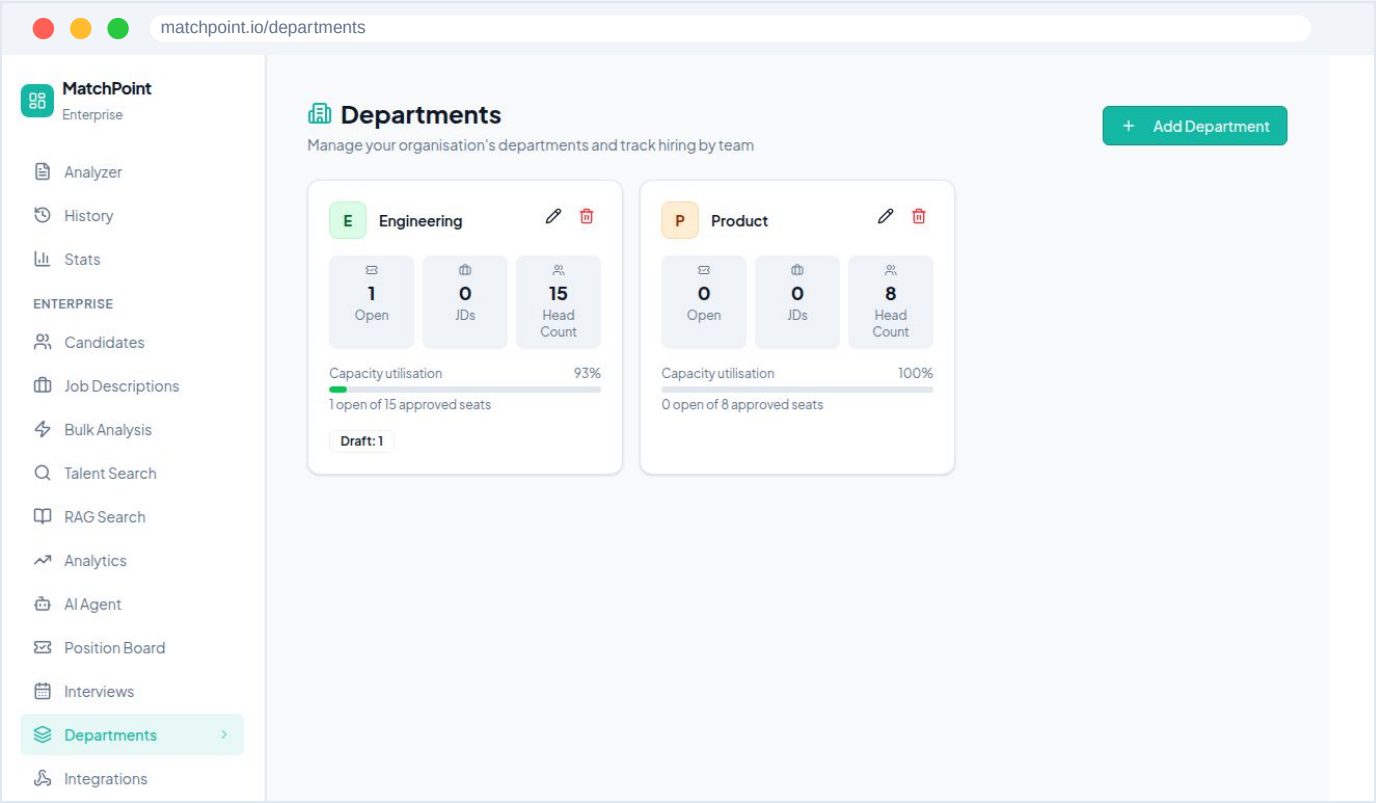
ENTERPRISE

Departments

19

https://app.matchpoint.io/departments

Create and manage your organisation's departments. Each department card shows live hiring stats, approved headcount, capacity utilisation, and a pipeline status breakdown — giving leadership instant visibility across teams.



Key Features

- Card-grid view — one card per department with live stats
- Per-card stats: open positions, JD count, approved headcount
- Capacity utilisation bar — shows what percentage of approved seats are filled
- Pipeline status badges — Draft, Open, Sourcing, Screening, Interviewing, Offer, Closed counts
- Add Department — set name, description, and approved headcount
- Edit and delete departments with full confirmation dialogs
- Department filter on the Position Board — scope the Kanban to one team
- Department selector on JD create/edit forms for cross-linking
- Analytics page shows a department breakdown section with per-dept pipeline data
